

RUNNING YOUR EVALUATION

Name of System:

Briefly describe your study design

(What were the key design questions? What kind of study was this? [qualitative or quantitative, within or between-subjects]. What was your study procedure?)

What kind of data did you collect?

(Describe the types of data that were collected and how much information you have. How did you store the data?)

How did you analyse the data?

(Provide details of your analysis. Why did you decide to apply this analysis?)

How do you interpret your results?

(Did you get the answers to your questions? How does your analysis relate to what you wanted to know? What does this mean for the next iteration of your system?)

Now that you have your evaluation results, you can take a step back and reflect on your project. Discuss what you want to do next in your project team. Improve your prototype based on the results of the evaluation. Decide what design activities you can still complete in order to improve the system within the time frame of the project. Write down the key insights below.

What are the next steps?

(Describe how you plan to move on from your results to improvements in your prototype. What is the next big design choice for your system?)
